

EPC2021 SPICE Thermal Model

$R_{\theta JB}$ & $R_{\theta JC}$

$R_{\Theta JB}$ Simulation

Finite Element Simulation of Junction Temperature

- Board side of solder bumps maintained at 300 K
- Backside silicon thermally floating
- No radiation or heat transfer to air

$R_{\Theta JC}$ Simulation

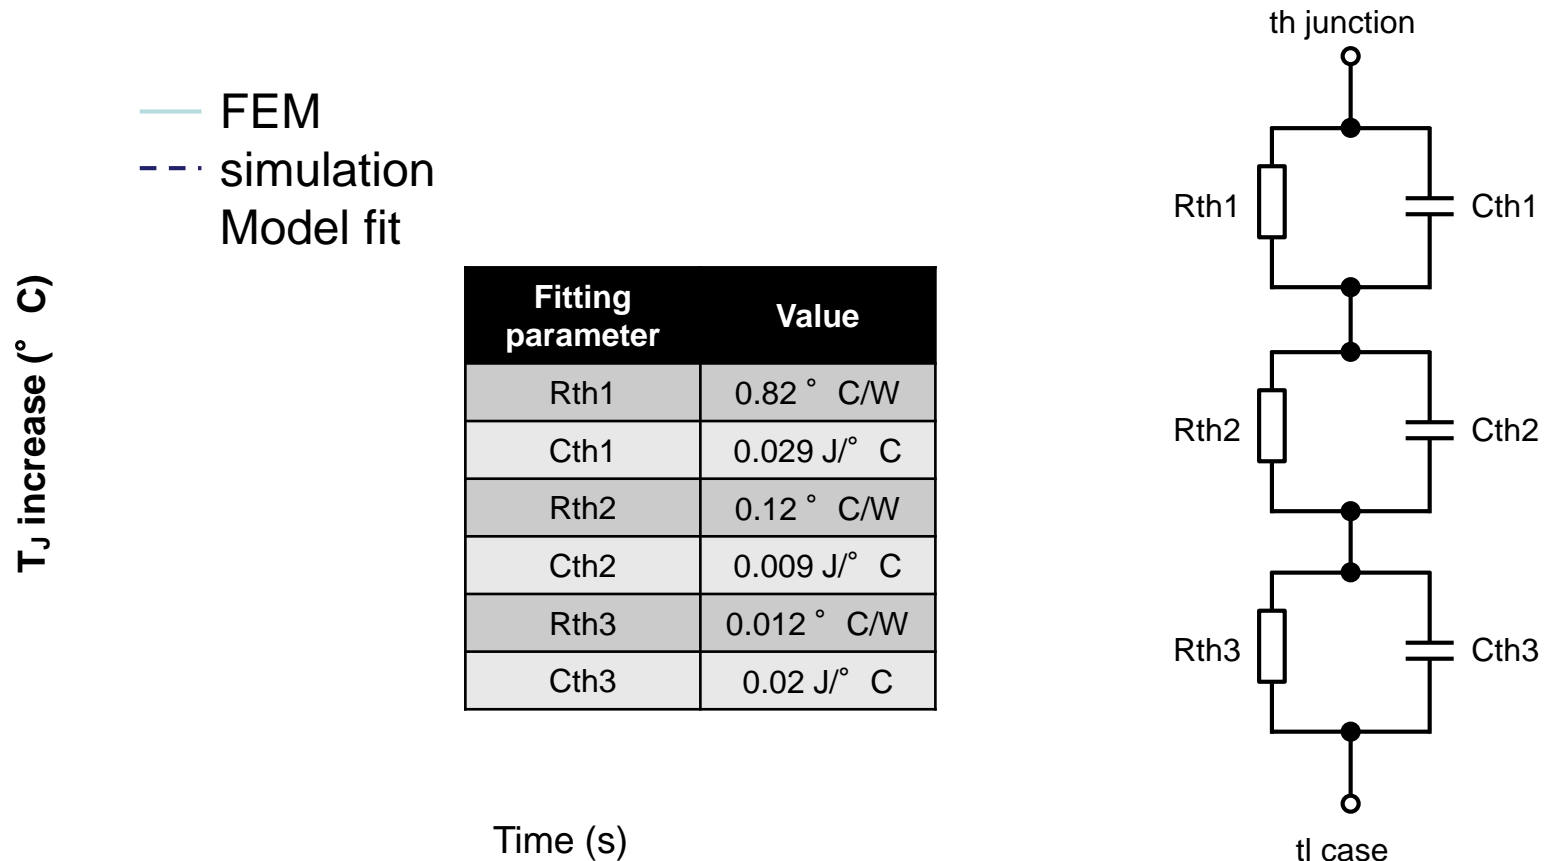

- Backside silicon maintained at 300 K
- Board side of solder bumps thermally floating
- No radiation or heat transfer to air

Finite Element Simulation of Junction Temperature

Transient $R_{\Theta JB}$

Transient junction temperature as a function of time under 1W load

Transient $R_{\Theta JC}$

Transient junction temperature as a function of time under 1W load

*The end of the road
for silicon.....*

*is the beginning of
the eGaN FET
journey!*
