

Demonstration System EPC9534 Quick Start Guide

1/16th Brick Test Fixture

Revision 1.0

DESCRIPTION

The EPC9534 board is a 60 V maximum input voltage, 16 V maximum output voltage and 25 A maximum output current, 16th brick motherboard. The EPC9534 features:

- Measurement: input voltage, output voltage (kelvin connection)
- Control/Adjustment: power good output, output voltage trimming resistor, disable jumper, remote voltage sense

Table 1: Performance Summary (T_A = 25°C) EPC9534

Symbol	Parameter	Min	Typ	Max	Units
V _{IN}	Input Voltage			60	V
V _{OUT}	Output Voltage			16	
I _{OUT}	Output Current			25	A
I _{IN}	Input Current			12	
PG	Power Good			5	V
FB	Output Voltage Adjust			100*	kΩ
V _{sense}	Voltage Sense		12*	16*	V

* Value differs depending on the specific 1/16th brick module

QUICK START PROCEDURE

Figure 1 shows an example configuration and measurement setup.

1. With power off, carefully insert the 16th brick module into EPC9534 and make sure it is properly seated.
 - a. Ensure that the mounting holes on the EPC9534 line up with the pins on the 16th brick module
 - b. Carefully insert the module into the mounting holes.
 - c. Ensure all pins insert the mounting holes uniformly
 - i. With your hands, apply a slight pressure to the corners of the 16th brick module. Apply only enough pressure such that the 16th brick module sits as flat as possible in the mounting holes.
 - ii. Apply pressure alternately (one side at a time) in order to wiggle the 16th brick module into place and make sure it is firmly connected to the fixture.
2. With power off, connect the power supply, load, and multimeters according to figure 1:
 - a. V_{in} (J1) and GND (J2) banana jacks
 - b. V_{out} (J3) and GND (J4) banana jacks
 - c. Kelvin sensing: V_{in} (TP1) and GND (TP2), V_{out} (TP3) and GND (TP4)
 - d. (Optional) V_{out} sense (J13) to load terminals, shown as dashed lines in figure 1.

3. Turn on the input power supply to the required value (do not exceed the absolute maximum voltage of 60 V on V_{in}). The output voltage is preset on the 16th brick module. During operation, check to make sure the circuit is operating correctly and that the output voltage does not exceed the absolute maximum voltage of 16 V.
4. For shutdown, please follow steps in reverse.
5. To remove the 16th brick module:
 - a. Carefully grab the module from the top and bottom (not the side with the pins), and remove the module.
 - b. If the module is difficult to remove, apply alternating pressure to the top and bottom of the module until it loosens.
 - c. Do not use any tools to remove the module, as it can cause damage to the module or test fixture.

Figure 1. Example measurement setup: Top view of EPC9534

CONTROL / ADJUSTMENT

1. Power Good (J12) should have logic high level once the unit is operating.
2. The 16th brick module can be disabled by inserting a jumper into J11.
3. The output voltage of the 16th brick module can also further be trimmed by adjusting R_1 . R_1 is connected between FB and GND, as shown in figure 2. Please refer to the 16th brick module documentation for details.

Figure 2. Output voltage adjustment R_1 and connection to the 16th brick module voltage feedback circuitry

THERMAL CONSIDERATIONS

The EPC9534 is intended for bench evaluation with low ambient temperature and convection cooling. The recommended airflow direction for the board is shown in figure 3.

Demonstration Board Notification

The EPC9534 board is intended for product evaluation purposes only. It is not intended for commercial use nor is it FCC approved for resale. Replace components on the Evaluation Board only with those parts shown on the parts list (or Bill of Materials) in the Quick Start Guide. Contact an authorized EPC representative with any questions. This board is intended to be used by certified professionals, in a lab environment, following proper safety procedures. Use at your own risk.

As an evaluation tool, this board is not designed for compliance with the European Union directive on electromagnetic compatibility or any other such directives or regulations. As board builds are at times subject to product availability, it is possible that boards may contain components or assembly materials that are not RoHS compliant. Efficient Power Conversion Corporation (EPC) makes no guarantee that the purchased board is 100% RoHS compliant.

The Evaluation board (or kit) is for demonstration purposes only and neither the Board nor this Quick Start Guide constitute a sales contract or create any kind of warranty, whether express or implied, as to the applications or products involved.

Disclaimer: EPC reserves the right at any time, without notice, to make changes to any products described herein to improve reliability, function, or design. EPC does not assume any liability arising out of the application or use of any product or circuit described herein; neither does it convey any license under its patent rights, or other intellectual property whatsoever, nor the rights of others.
